### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Reginald A. Ratliff, Reg. No. 48,098 on September 23, 2004.

2. The application has been amended as follows:

In the claim: Please amend claim 15 as follow:

Claim 15, line 1, please replace "1" with -- 14 --.

### *Reasons for Allowance*

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Korhonen et al. [Korhonen] (U.S. Patent No. 5,378,935) discloses a system that facilitates clock frequency adjustment of the various clocks supplied to sub-circuits of an electrical circuit system. Specifically, Korhonen is concerned with the selection of the appropriate clock frequency to supply to each of a plurality of sub-circuits of an electrical circuit system. Korhonen's system does not include phase shifters for shifting the phases of current clock and new clock and logic means that receives a current clock, a phase shifted current clock, a new

clock, a phase shifted new clock and a signal (from a processor directing a speed change) as inputs to the logic means.

4. The following is an examiner's statement of reasons for allowance:

Applicant's claimed invention distinguishes over the prior art for the following reasons. The claims are allowable over the prior art of record because none of the references, either alone or in combination, discloses or renders obvious a circuit that allows a processor that forms a part of a microcontroller to change its operating frequency and includes, among other circuitries, logic means which receives a current clock, a phase shifted current clock, a new clock, a phase shifted new clock and a signal from the processor directing a speed change as inputs thereto, the logic means for producing a signal latching a new speed into a current speed latch at a point in time after the speed change signal when the current clock, phase shifted current clock, the new clock and the phase shifted new clock have the same state.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
